

Audience Behaviour Report — Q1 2025

Futures First Entertainment · Internal Use Only · Confidential

Audience Segmentation Overview

Analysis of 2024-2025 viewing data identifies four primary audience segments:

Segment A — Sci-Fi Enthusiasts (23% of viewers, 41% of revenue): Predominantly male, aged 22-38, urban, premium tier. Highest completion rates (87% average), heaviest social media engagement. Stellar Run's core audience. Concentrated in Mumbai, London, and Tokyo.

Segment B — Drama Loyalists (31% of viewers, 24% of revenue): Gender-balanced, aged 28-50, suburban, standard tier. Highest loyalty with 87% return watch rate. Last Kingdom and The Still Season serve this segment.

Segment C — Action Casuals (28% of viewers, 30% of revenue): Male-skewed, aged 18-35. High opening weekend attendance, lower completion rates. Price-sensitive. Dark Orbit's primary audience.

Segment D — Comedy Seekers (18% of viewers, 5% of revenue): Family-oriented, aged 30-50, suburban. Currently the most underserved segment. Studio comedy releases have consistently missed this audience's content expectations.

Comedy Audience Mismatch Analysis

The studio's comedy titles in 2024-2025 were developed and marketed targeting Segment C (Action Casuals, aged 18-35) rather than Segment D (Comedy Seekers, aged 30-50). This fundamental mismatch explains the poor performance.

Panel research conducted in February 2025 found that 71% of Comedy Seekers described recent studio comedy releases as 'not relevant to them' and 64% stated they had reduced their cinema attendance for comedy films in favour of streaming originals from competing services.

Comedy content that performs in the current market tends to feature ensemble casts with broad appeal, grounded real-world settings, and emotional depth beyond pure humour. The studio's recent comedy releases have prioritised slapstick and situational comedy, which testing suggests appeals primarily to under-18 audiences who are not the primary ticket-buying demographic.

Mumbai Market Deep Dive

Mumbai has emerged as the studio's most dynamic international market. In April 2025, the city recorded an engagement score of 92.4 — the highest of any market globally. This performance is driven by three factors:

- Strong Sci-Fi cultural resonance: Mumbai audiences over-index on Sci-Fi consumption relative to global averages by 2.4x.
- Mobile-first viewing behaviour: 78% of Mumbai views occur on mobile devices, making the market highly responsive to social media campaigns.

3. Influencer ecosystem: The city's large creator community amplified Stellar Run's AR campaign with high-quality local-language content.

Recommendation: Mumbai warrants a dedicated marketing budget allocation and local partnership strategy. A Hindi-dubbed release strategy for all major titles should be evaluated for 2026.

Streaming vs Theatrical Behaviour

Analysis of watch activity data shows that titles with high theatrical completion rates (above 75%) generate 3.2x more streaming views in the 90 days post-theatrical than titles with low completion rates (below 60%). This correlation is strongest for Drama and Sci-Fi genres.

Stellar Run's 91% theatrical completion rate predicted its exceptional streaming performance. Last Kingdom's 84% completion rate similarly drove outsized streaming numbers despite modest theatrical attendance.

Action titles show the weakest correlation between theatrical completion and streaming uptake, suggesting that action audiences are more likely to view theatrically and not return for a second streaming viewing.
